EDUCATION

Bachelor of Technology in Computer Science and Engineering — August 2024 - Current
GITAM Deemed to be University, Hyderabad
CGPA: 8.83/10.00

BIEAP, Class XII — June 2022 - March 2024
Narayana Junior College, Tirupati, Andhra Pradesh, 96.5%

BSEAP, Class X — June 2021 - March 2022
Sri Chaitanya School, Tirupati, Andhra Pradesh, 97%

SKILLS

Technical Skills	Python, Java, C, HTML, CSS, JavaScript, Data Structures
Soft Skills	Problem Solving, Team Collaboration, Time Management, Adaptability, Clear Communication

PROJECTS

NotifyMe - CLI based Task Management Program | C Language — GitHub Link
Mini Project as a part of curriculum

- Engineered a CLI-based task management system in C capable of handling up to 100 concurrent tasks with priority-based execution (High/Medium/Low).
- Designed a time-driven scheduling mechanism using system time APIs to continuously monitor deadlines and trigger multi-stage reminders at 60, 30, and 10 minutes prior to task expiry.
- Implemented modular, function-driven architecture for task creation, deletion, and retrieval, improving code maintainability and scalability.
- Integrated OS-level notification support through system command invocation, enabling real-time alerts without blocking program execution.
- Applied robust date-time parsing and validation using struct tm, mktime(), and difftime() to ensure accurate deadline computation and prevent invalid inputs.

Personal Portfolio Website | HTML, CSS, JavaScript — Website Link

- Designed and developed a responsive personal portfolio website using semantic HTML5, modern CSS, and vanilla JavaScript, ensuring cross-device compatibility across desktop, tablet, and mobile screens.
- Implemented a flexbox-based responsive layout with breakpoint handling (<900px, <700px), improving usability and layout stability across screen sizes.
- Built interactive UI components, including animated navigation, smooth scrolling, flip-card project displays, and section-based fade-in transitions using the Intersection Observer API.
- Enhanced accessibility and UX by integrating keyboard-navigable components, focus management, ARIA live regions, and non-blocking inline form feedback.
- Optimized visual performance with CSS transitions, transforms, and gradient theming, maintaining smooth animations without external libraries.

Social Network Recommendation Engine | Python — GitHub Link

- Implemented a Python-based recommendation system that suggests users and pages based on mutual friends and shared interests.
- Cleaned and structured JSON data by removing duplicates and inactive users to improve recommendation accuracy.
- Used hash-based data structures (dictionaries and sets) to efficiently rank and return relevant recommendations.
